

FREE COMMUNITY LECTURE BY DR. BOB & DR. TURNER ON JUNE 23, 2011

"CREATING PROSTATE CANCER CURES & REMISSIONS SYSTEMICALLY"

Topics to be discussed include:

- **Management of high-risk, recurrent, metastatic and/or castrate resistant prostate cancer (PC)**
 - COMG conceived, pioneered and named "Three Pronged Treatment Protocol". This unique, extraordinarily effective, successful program attacks PC cells using 3-drug Hormone Blockade (not our classic Triple Hormone Blockade®); along with our low dose weekly Taxotere/Emcyt/Carboplatin CT for 12 or 15 doses over 4-5 months, and our well known anti-angiogenic cocktail that helps turn-off the blood supply to PC cells.
 - Full dose anticoagulation is needed and many agree that Arixtra or Low-Molecular-Weight-Heparin (LMWH), but not Coumadin/Warfarin, has anti-angiogenic benefits.
 - We have found that over 90% of our patients respond to this Three Pronged Treatment Protocol approach. These results are far superior to anything published.
- **In the past several years, articles have appeared reviewing results intermittent chemotherapy.**
 - Rather than using indefinite continuous chemotherapy to treat metastatic PC, most articles report that approximately 18-25% of men are able to temporarily discontinue chemotherapy (CT) and enjoy an off-CT drug-free "holiday". These CT-free intervals last approximately 12-22 weeks.
 - Our Three Pronged Treatment Protocol results in almost all of our patients being able to discontinue their CT and remain off CT, on average, well more than one year and for many COMG patients, they are able to be off CT indefinitely.
- **For over 60 years, testosterone therapy has been absolutely contraindicated for men with PC**
 - We were all taught that giving testosterone (T) to any PC patient was like "pouring gasoline on a fire" and is the absolute wrong thing to do.
 - COMG recently reported our experiences using TRT in 96 of our PC patients, including many with metastatic castrate resistant PC; patients whose initial PSA levels were over 1000; patients who recurred following R.P., R.T., HB and/or CT. The results appeared in British Journal of Urology International, a peer-reviewed medical journal. We shall present our data including our rationale for treating to achieve T levels of 1800-3000!!!
 - We have used continuous TRT to treat PC for longer than 10 years in one of our patients with PC.

Triple Hormone Blockade[®] is the registered trademark of Robert Leroy Leibowitz, M.D.

Date & Time: Thursday, June 23, 2011. Lecture starts at 7pm.

*Doors open at 6 PM to pick up information, books and video DVDs, etc.

*2 pre-meetings at 5 PM: "Newly Diagnosed" or "Advanced/Recurrent Disease"

Location: First Presbyterian Church, 838 North Euclid Street, Fullerton, CA 92832
For maps & directions, visit <http://www.prostateforum.org/location.cfm>

Sponsored by the Prostate Forum of Orange County
